- - - - -

* COTONEASTER PRAECOX *

- This is one of the hardiest Cotoneasters and went through 20 degrees
 * below zero without any harm. It has large berries like cranberries
 - which color up in the middle of August and remain on until very late
 * Fall. It grows rather flat and makes an ideal plant to mix in with
 - foundation plantings and especially with ranch type houses. It also
 * makes an ideal low spreading hedge. *

 - RHUS COTINUS ROYAL PURPLE -
 * (New dark purple-red leaf Smokebush) *
 - There are several varieties of Purple Smokebush although Royal Purple is -
 * considered the very best. Several varieties of Smokebush have been tried *
 - out in the nursery with Royal Purple always turning out to be the most -
 * satisfactory. I am convinced of this to the extent that it is the only *
 - one now being propagated in the nursery. Royal Purple keeps its rich -
 * dark purple reddish colored foliage from Spring to late Fall. In late *
 - summer the matured leaves show a mottled edge which is a light red edge -
 * around the dark purple leaf. It is an outstanding plant in that it *
 - draws the attention of all who visit the nursery and is greatly admired -
 * for its brilliant foliage. The foliage is darker than any red Japanese *
 - Maple. The plant is adaptable for use as a lawn specimen especially in -
 * locations where the Japanese Maple is not hardy. Royal Purple is the *
 - only purple Smokebush to receive a Certificate of Merit from the Royal -
 * Horticultural Society. *
 -
 * 2,000 2-3', B&B \$3.50 per 10 *
 - \$3.00 per 100 -
